

Welcome to Professional Hearing Aid Center, we look forward to working with you to improve the quality of your hearing. We are committed to providing quality, service, value and selection while adhering to the highest ethical standards when it comes to your hearing healthcare. Patient education is paramount at Professional Hearing Aid Center; our Audiologists encourage patients to be informed to find an appropriate solution to their hearing needs. We recommend that you bring a friend or family member to your initial appointment.

At your initial appointment we will discuss the type and severity of your hearing loss. It is also important to determine how hearing loss is affecting your life. We will discuss various sizes of hearing aids, technology of hearing aids and price. At Professional Hearing Aid Center, you will find a wide selection of hearing instruments from the most advanced fully digital hearing aids to basic digital hearing aids. Let us help you choose the right technology to fit your lifestyle. Your Audiologist's main objective is to find the most comfortable, affordable, and appropriate hearing device for your individual needs and lifestyle.

Choosing the right technology

Advanced...

- You lead a very active lifestyle
- You encounter many different sound environments every day
- You are often in background noise or social situations
- You are in meetings or work situations
- You enjoy music
- You desire top-quality hearing with no compromises

Mid-level...

- You lead a moderately active lifestyle
- You encounter a few different sound environments during the week
- You are occasionally in background noise
- You are sometimes in meetings or work situations
- You occasionally listen to music
- You desire very good hearing most of the time

Basic...

- You lead a mostly quiet lifestyle
- You rarely encounter background noise
- You would mostly like to hear your television or radio better
- You are concerned with hearing in small groups or one-on-one conversation
- You are seeking a budget-friendly solution to improve your hearing

Choosing the right style

In most cases, you are free to choose your preferred size; however, there are some hearing losses that are not desirable to fit with a smaller hearing aid. We will discuss your hearing loss and make recommendations based on what is appropriate for you.

Considerations when choosing the size/style of a hearing aid...

- Severity of hearing loss
- Size and shape of ear
- Ability to handle/adjust
- Cosmetic appearance
