

**Enjoy Better Hearing in 5 Simple Steps With the:**

# ClearLife NeuroHearing™ System

*Better hearing starts in the brain.*

The ClearLife NeuroHearing™ System is an exclusive treatment method that combines leading edge NeuroHearing™ Technology with brain re-training processes, guaranteed to maximize your hearing ability and help you stay active and engaged for years to come.

## 1. Hearing Testing & Consultation

We will go in-depth to measure how you are hearing and determine your brain's speech processing abilities. Our industry-leading hearing test protocols will rule out any treatable medical conditions that could be causing your hearing problems, and give us a clear picture of your hearing abilities and options for treatment.

Then, with a combination of questionnaires, interview questions, and diagnostic technology, your audiologist will work with you to determine your listening concerns, history, lifestyle, and quality-of-life goals.

## 2. NeuroHearing™ Technology and Treatment Options

**NeuroHearing™ Technology**, the new generation of hearing loss technology, is designed to treat the cognitive impairments of hearing loss. Unlike traditional hearing aids that are manufactured to simply make things louder, today's treatment options have been hand-selected by our audiology team to restore clarity of speech in all listening situations, including rooms with significant background noise. There are several **NeuroHearing™ Technology** options available depending upon the results of the hearing evaluation.

**NeuroHearing™**  
Technology

## 3. Adaptation to NeuroHearing™ Technology

Stimulation of the auditory system has a positive impact on the entire brain – and needs to be delivered at a conservative pace to ensure a successful treatment. The **ClearLife NeuroHearing™ System** method of adapting clarity and volume levels within the first few months has been shown to have the most effective treatment rate – with the highest patient satisfaction.

## 4. Scientific Verification of Improved Hearing Ability

It is critical that treatment be scientifically verified and validated. 'In-Situ' or in-ear measurements provide a method to objectively assess the accuracy and stimulation levels of **NeuroHearing™ Technology** when placed in your ear. These measurements are considered the gold standard method for achieving a proper clarity and stimulation.

## 5. Ongoing Relationship and Personalization of Hearing Needs

Your hearing needs will continue to change throughout life, and we value our ongoing relationship you. We commit to working with you for many years to come. Our comprehensive treatment programs include service, cleanings, discounted supplies, annual hearing evaluations and ongoing support. When you work with our practice, you have a partner in enhanced hearing and improved quality of life, and we will always look forward to seeing you whenever you need our help.
